

# Feedback - Group N - NYC Rats

TA: Nico Rojas

04/02/2021

## General Comments.

- Interesting proposal, it seems you have everything you need for your final project.

## Specific Comments.

- I'm not completely sure what are the centroids you talk about for the maps, but the heat maps seem like an appropriate way to identify areas with more rats sighting. However, if rats' sightings are too scattered (which would be unexpected) the heat map may not work as well.
  - On the section from week 07 you can find some implementations of the Heatmap plugin for leaflet, including changes of a magnitude over time.
  - Also, there is an implementation of the search plugin, which may be used for looking for your zip code.
- “Can be possibly used for text analysis” I'm not sure how do you plan to do text analysis with the data set you have.
- There are **some stories** that appeared in the news last year about aggressive rats migration due to restaurants closings. Maybe that could help to find a clearer pattern for your last visualization.
